Physical devices security consolidation with Network monitoring & Assets management. Convergence of Cybersecurity with Physical Security

Vanguard NCM – Network Cyber Management system

The Vanguard system is a solution designed for Cyber Physical Systems with an Out-of-Band architecture, that converges Cybersecurity with Physical Security.

The Vanguard solution offer physical devices security consolidation with Network monitoring & Assets management. It seamlessly integrates with all existing systems and solutions for overall monitoring across the board.

OUT OF BAND- Separation between the Nelysis platform and the monitored network
Working in the shadows

THE NELYSIS SOLUTION

The only Holistic **Out of Band** solution that converges Cybersecurity with Physical Security.
Network monitoring and Cybersecurity for any connected device.

Vanguard Key Features:

- Assets management, scoring and alerts assessment
- 360° Full visibility for real time continuous tracking
- Devices quarantine and isolation control
- Root-Cause analysis & prediction
- Convergence of Cybersecurity functions with Physical security
- Out-of-Band design ,Auto-segmentation & device control
- Agentless & Vendor Independent
- Network health monitoring for complete operational continuity

nelysis

Vanguard MSM Provides a unified user interface enabling the control and the monitoring of the various element in all monitored networks.

Vanguard NGS Together with the Vanguard Core Server creates an Out-of-Band tunnel, to the monitored network.

Monitoring The Vanguard system supports different types of events monitoring like DPI, Syslog, SNMP, WMI & Windows event logs, etc. enabling data consolidation and the Convergence of Cybersecurity with Physical Security.

Vanguard Collector Series - The Vanguard Network Traffic Collector (NTC) is a network analyzer that collects, consolidates and send traffic information to the Vanguard Network Central Management software (NCM).

VANGUARDING YOUR ASSETS SECURITY
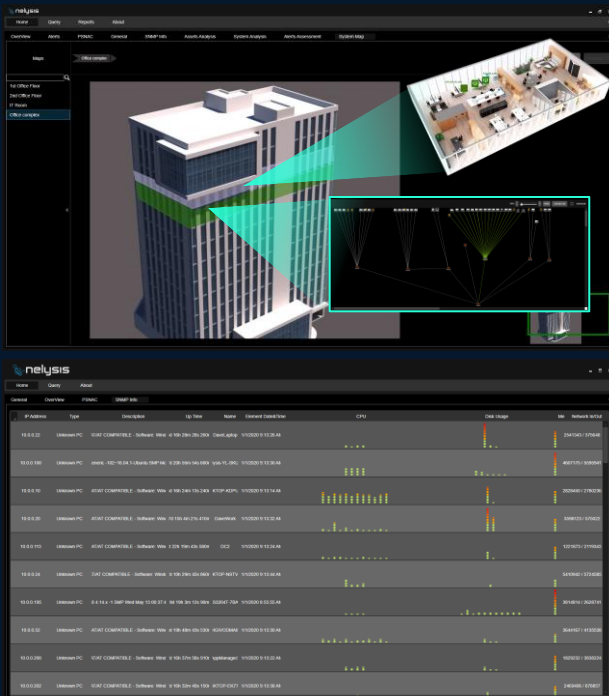

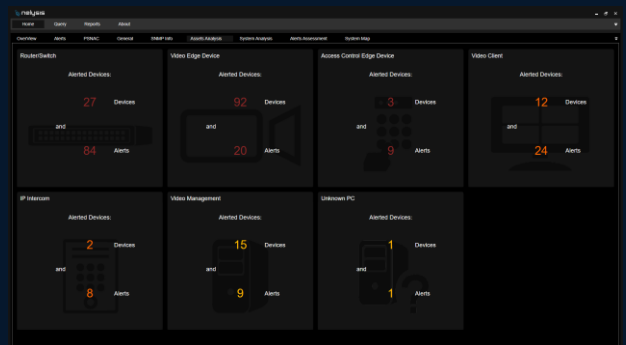

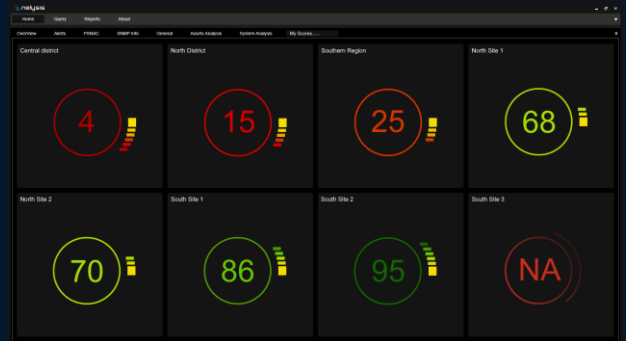

Gaining 360° visibility out of chaos

Physical device security

Converges Cybersecurity with Physical Security

Segmentation & device control

Out-of-Band Architecture

Full visibility & Assets management

Root-Cause analysis & prediction

Sites and devices scoring

Features Scheme

License	IPs	Out Of Band	Collectors	PSNAC	SDK	Notes
All-In-One	Up to 48	No	1	Yes	Yes	Standalone SW+HW
Advanced	Unlimited	Yes	Unlimited	Yes	Yes	SW only
